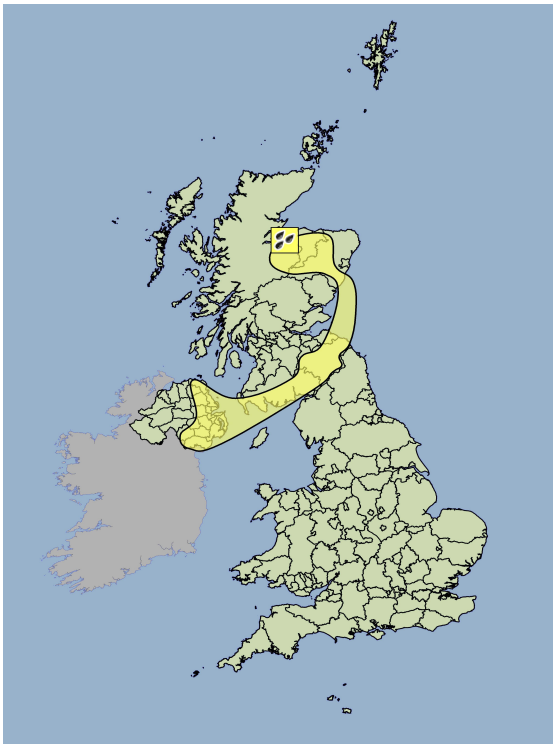
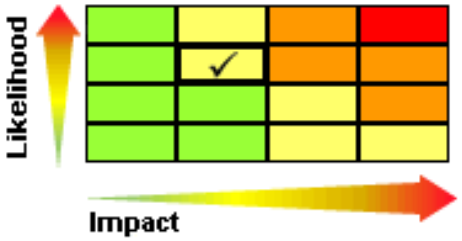
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure is expected to move westwards from the North Sea into central parts of the UK on Saturday. This will contain some very moist air and generate some heavy rainfall. The largest amounts of rainfall are likely to fall over east-facing hills, but some heavy bursts are possible anywhere within the yellow area. The exact track of the low is a little uncertain at present so this warning may be updated later Friday or on Saturday, and the public are advised to stay in touch with the latest forecasts.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **06:00 on Sat, 18th May 2013** until **23:59 on Sat, 18th May 2013**

Early on Saturday morning spells of heavy rain will affect some southern parts of Scotland and then spread to parts of Northern Ireland and also Northeast Scotland during Saturday. The public should be aware of the potential for localised travel disruption.
